

GTS Version 6.1 Release Notes

Version 6 Code Audit Changes

- The GTS code base has been updated with changes suggested in the Version 6 Code Audit.

API Changes

- The session statistics endpoint is now only accessible to admins (via token header)

GUI Changes

- Added the Visual DSL Editor.
- Added a notification when projects fail to be created or removed.
- Added a button allowing users to remove all data about themselves.
- Added location column to resource lists in infrastructure tabs.

Performance and Fixes

- Fixed a silent error when attempting to create a project with a VPN Username or a project name that does not meet length requirements.
- Fixed an error when trying to create user for projects that no longer exist.
- Fixed an error with releasing links in certain cases.
- Fixed an issue in the GUI with resource lists not being properly populated since version 6.0.
