

SmokeTrace

SmokeTrace

Some versions of the SmokePing active measurement and visualization tool included a tool called *SmokeTrace*. Like SmokePing, SmokeTrace runs on a Web server. Unlike SmokePing, SmokeTrace performs [traceroute](#)-style measurements *on demand* and in real time. The presentation is very similar to [mtr](#), and is based on AJAX (Asynchronous Javascript and XML) for communication between the browser front-end and the back-end in the Web server.

In SmokePing 2.5.0, SmokeTrace support was removed. The release notes point to a new and more general tool called [remOcular](#), which should be used instead.
