Application Tools

Host and Application Measurement Tools

Network performance is only one part of a distrbuted system's perfomance. An equally important part is the performance od the actual application and hardware it runs on.

- Web100 - fine-grained instrumentation of TCP implementation, currently available for the Linux kernel.
- SIFTR - TCP instrumentation similar to Web100, available for *BSD
- DTrace - Dynamic tracing facility available in Solaris and *BSD
- NetLogger - a framework for instrumentation and log collection from various components of networked applications
